## Retinal Screening Photos

A retinal screening is a non-invasive diagnostic tool that takes an image of your optic nerve, macula, retinal blood vessels and retinal tissue. Why is it necessary? Early signs of many diseases occur inside of the eye including diabetes and hypertension. It can also help to better detect various medical conditions such as glaucoma and macular degeneration. This is not an alternative to dilation or other diagnostic testing.

We strongly encourage each patient to have a retinal screening performed as a baseline and to better monitor for changes each year. The screening is not covered by insurance. **The cost for this testing is \$24.**

### Please check one of the following:

- Yes, I would like to have the retinal screening photo performed.
  
- No, I do not want to have the retinal screening photo performed.

## Informed Consent for Dilation of Eyes

Dilation of the pupils is the best way to have a complete eye examination. The purpose of dilating your pupils is to perform a more thorough examination of the health of your retina (the inside of your eye). A series of drops are placed in your eyes to enlarge the pupils. **There is no additional charge for this procedure.** Dilation may temporarily result in blurred vision, glare, and sensitivity to light for two to six hours. In most cases, only your near vision will be blurred. In rare cases, it may cause redness, headache, or foggy vision. Sunglasses will be provided for your safety and comfort.

### Please check one of the following:

- I do wish to have my eyes dilated and understand the side effects
  
- I do not wish to have my eyes dilated. I understand that there may be diseases that cannot be ruled out and as a result, I do not hold Kelly Nilsson, OD, Family Eye Care of Columbus Inc, The Landings Eye Care or its associates liable for delay in diagnosis and treatment.

Reason that you do not wish to be dilated at today's visit \_\_\_\_\_
